

CETKA
**DIAMOND
STONE**
LUXURY STONES AND BRICKS
& FIBER PANEL SYSTEMS

CETKA was founded by Emrah Kansuk in Ankara - Turkiye in 2007. Diamond Stone, Diamond Panel, Stonehenge Veneer are our subbrands.

CETKA team start off with the mission to create more beautiful living spaces than your dreams by implementing the most authentic designs with the latest technology at our 4000 square meter factory. We are conducting this mission through sustainable production.

Our vision is to be a brand of choice around the world with our quality and innovative products and to become a leading brand in the industry. In this process, CETKA, which closely follows the currents and latest technology around the world, offers the best quality products to you with minimal environmental damage.

We serve to our valuable customers with a total of 52 showrooms around the world. Our products, which we have successfully exported to 27 countries for 18 years, have all necessary certificates from international organizations to prove our quality.

Sincerely
Emrah Kansuk
Founding Executive

DEKORATIF KÜLTÜR TAŞLARI TUĞLA VE PANEL SİSTEMLERİ

İstenilen ölçülerde üretilir.
It is produced in desired dimensions.

GRC Board

Technical Details

Dimensions / Ölçüler : 60 x 125 cm

Grout Gap / Derz Aralığı : 0.7 cm

Thickness / Et Kalınlığı : 1.8 cm

Brick Groove / Tuğla Kanalı : 6.8 cm

Ürün Hakkında

Bu sistemde, tuğla kanallı paneller alüminyum ankrajlarla sabitlenerek bina duvarına monte edilen ısı yalıtım malzemesi ile arasında bir hava boşluğu oluşturulur. Ankrajlar sayesinde düzgün bir yüzey elde edilirken, kültür tuğlaları cam elyaf takviyeli çimento esaslı tuğla kanallı levha (GRC Board) üzerine yapıştırılıp derz dolgusu ile tamamlanır. Derz uygulaması, sistemin dayanıklılığını artırdığı için kesinlikle önerilir. Derzler, kaplama tuğlalarını çevreleyerek daha sağlam ve uzun ömürlü bir yüzey oluşmasını sağlar.

About Product

In this system, brick-grooved panels are securely fastened onto aluminum anchors, creating a gap between the installed thermal insulation material and the building wall. The anchors ensure a smooth and even surface, while cultured bricks are adhered to a glass fiber-reinforced, cement-based grooved board (GRC Board) and finished with joint filling. The application of joint filling is highly recommended, as it enhances the durability of the system. The joints envelop the cladding bricks, providing a more robust and long-lasting surface.
